

Eastwoods HIGH TEMP EXTREME CLEAR COAT (180g)

The ultimate clear coat! Eastwood asked their chemist to develop a clear coat that is chemically resistant, can withstand high temperatures and has superior UV protection.

The resulting product is chip/scratch resistant and compatibility with plastics, bare metal and most paints. If you have been looking for a clear coating that will resist brake fluid, hot fuel and protect most surfaces, yet be nearly invisible, this is the stuff! Perfect on intakes manifolds, engine blocks & wheels, UV sensitive plastic and more.

Apply with brush or spray gun, little goes a long way, 6 oz covers 4 wheels. It is supplied in a very thin, water-like consistency and should not require thinning even for spraying. If thinning is absolutely desired, the only substance that will do so is ButylAcetate.

Please also keep in mind that due to the superior chemical resistance of this product, nothing will dissolve it when fully cured. Not paint stripper, lacquer thinner...nothing. If spraying, it is imperative to clean any spray gun IMMEDIATELY after use with acetone or it will cure in the gun and destroy it
